Business Strategy Customer & Market Regulatory & Legal Security & Risk Cost/Value Politics

EU Compliance and Security Frameworks Complementing GDPR

EU Cloud Code of Conduct (CoC)

Common framework for GDPR compliance across IaaS, PaaS and SaaS (and more)

CISPE Code of Conduct (CoC)

Sector-specific GDPR framework for IaaS

GAIA-X

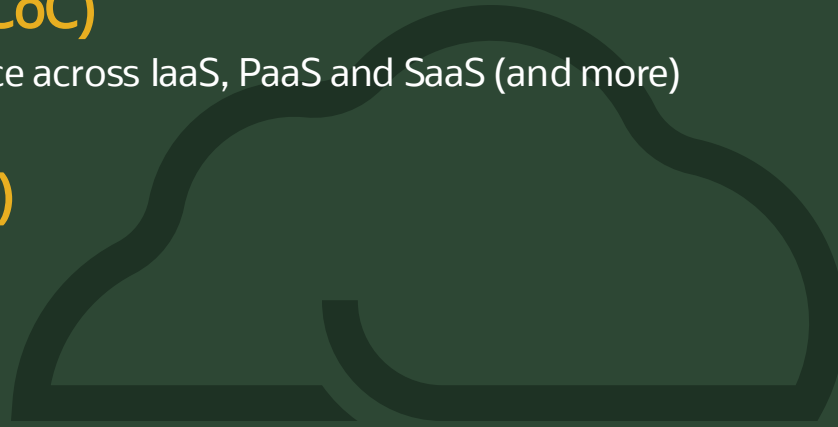

Focus on openness and interoperability / federation (GXFS) for data infrastructure

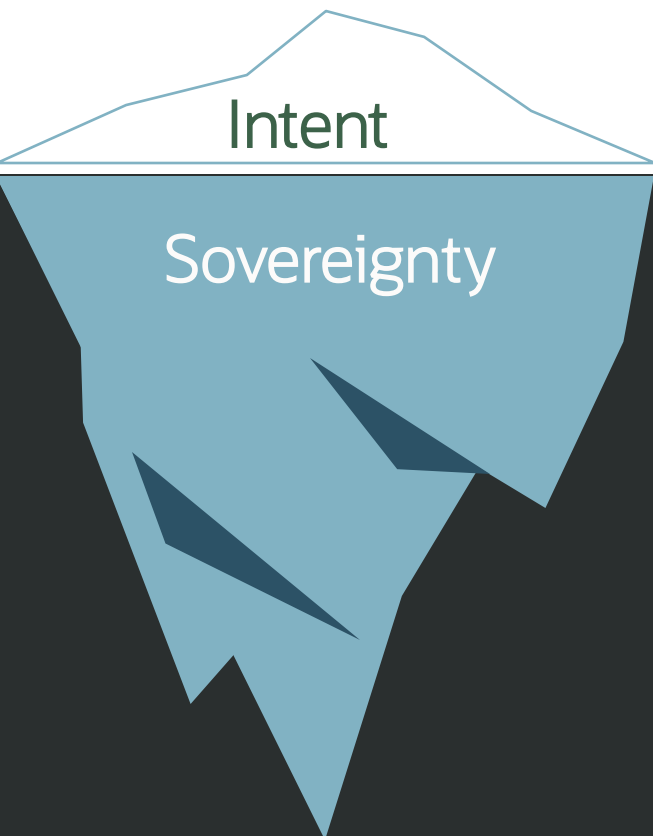

NIS2

Sets requirements for cybersecurity / supply chain / incident reporting in the critical sectors (cloud services, energy, healthcare, etc.)

DORA

Regulates the financial sector and focuses on digital resilience. Contractual rights, exit strategy, audits and EU authorities' direct supervision of cloud providers / hyperscalers

Looking Inside of EU Sovereign Cloud

No trade-off between digital sovereignty and cloud capabilities

- Dedicated set of **organizational**, **technical** and **contractual** controls, with EU Sovereign Legal entities.
- **No joint venture or partnership complexities** in time to market, operations, features set, or depth of support.
- Customers benefit from the **same enterprise-grade support**, entirely located in the EU, at **no extra cost**.

Organizational Controls

Overview

EU Sovereign Cloud Entities, Operations and Support

Complete separation from commercial regions

Operated by new, EU based legal entities created for this EU Sovereign region purpose.

These entities own:

Hardware and assets

Data Center leases

Cloud operations

Customer Support

The isolation of the EU Sovereign Cloud realm allows Oracle to restrict support and operations personnel to EU residents employed by the EU legal entities, including physical and logical access to the realm

The EU-based legal entities are backed by a governance committee to ensure integrity and alignment with current and future regulations

Support and operations are delivered within EU borders by EU residents employed by EU legal entities isolated from Oracle global cloud operations

EU Sovereign Cloud Dedicated Legal Entities

Oracle Sovereign Cloud
Germany GmbH

Oracle Sovereign Cloud
Spain, SRL

Responsible for providing support, hosting, and maintenance services for Oracle Sovereign Cloud Entities and for procuring EU Sovereign Cloud data centers

EU Sovereign South
(Madrid)

EU Sovereign Central
(Frankfurt)

Oracle Sovereign Cloud
Ireland Ltd

Oracle Sovereign Cloud
Polska Sp.z.o.o.

Oracle Sovereign Cloud
Czech Republic S.R.O

Oracle Sovereign Cloud
Romania S.R.L

Oracle Sovereign Cloud
Tech **Romania** S.R.L

Responsible for providing support, hosting, and maintenance services for Oracle Sovereign Cloud entities

Technical Controls

Overview

EU Sovereign Cloud helps users control data at multiple levels

Oracle offers unique proven technical features based on real-world experiences

Isolated EU Sovereign Cloud Realm

- Dedicated EU Sovereign Cloud Realm provides a full physical and logical separation from any other Oracle Cloud Regions
- Realm access is only possible to EU Sovereign legal entities teams: deployment, operation, support, maintenance, security
- This is providing customers with by design and by default EU data localization and EU data residency

Security and access controls, data protection and governance

- Full stack of cybersecurity solutions on top of EU Sovereign Cloud dedicated realm strong foundation
- Customers can enhance EU Sovereign Cloud deployments by implementing security controls to meet their audit, compliance and sovereignty goals
- Advanced data encryption and key management options for data security and confidentiality

Resiliency for applications and data

- Full Disaster Recovery capabilities available today entirely within the EU Sovereign Cloud realm
- High availability and resilience can be implemented locally, each Sovereign Region containing 3 Fault Domains
- FDs are separate groupings of hardware and infrastructure, they let customers distribute instances on different physical hardware within a Data Center

Advanced data encryption capabilities and control

Oracle offers unique and proven technical features based on real-world experiences

Data at rest and in transit encrypted at all times

- **Data at rest encrypted by default – encryption cannot be turned off**
 - Block volumes, Object storage buckets, File storage, Database services (Autonomous, ExaCS)
 - Encryption using AES-256
- Data in transit encrypted with TLS1.2 and Media Access Control security (MACSec) for point-to-point security on Ethernet links

Data in use can be encrypted through confidential computing

- Data in use protection through memory encryption with enhanced isolation using AMD Secure Encrypted Virtualization (SEV)
 - Data in memory isolated via encryption keys
 - **No code change required for onboarding**
 - Minimal performance impact across most workloads
 - **Confidential compute shapes same price as same non confidential shapes**
 - Bare Metal instances available

Advanced key storage and management

- **Complete Key Management choice:**
 - Oracle managed for simplicity
 - Customer managed for control
- Many Vault type: Software Vault, Shared or Private HSM partition
- Unique capabilities for advanced customers Sovereignty requirements:
 - Dedicated single-tenant HSM with no OCI APIs in Oracle EUSC
 - External Key Management: customers use On-Premise KMS/HSMs:
 - “Bring Your Own Key” (BYOK)
 - “Hold Your Own Key” (HYOK) with Thales KMS

Contractual Controls

Overview

Contractual controls for EU Sovereign Cloud: why they matter

Supplement technical and organization controls to provide adequate level of data protection

Provide clarity and assurance for legal compliance

Define responsibilities between Oracle and EU Sovereign Cloud customers

“In principle, supplementary measures may have a contractual, technical or organisational nature. Combining diverse measures in a way that they support and build on each other may enhance the level of protection and may therefore contribute to reaching EU standards.”

EU Sovereign Cloud Can Uniquely Help Your Business

Your platform for critical workloads

Run and modernize the most challenging workloads with greater architectural flexibility and superior performance, all in a Sovereign Cloud within the EU

Superior cloud pricing and flexibility

Save money on your most critical cloud resources, EU Sovereign Cloud prices are the same as our low price Global Commercial Cloud OCI

The full cloud in the EU by EU employees only

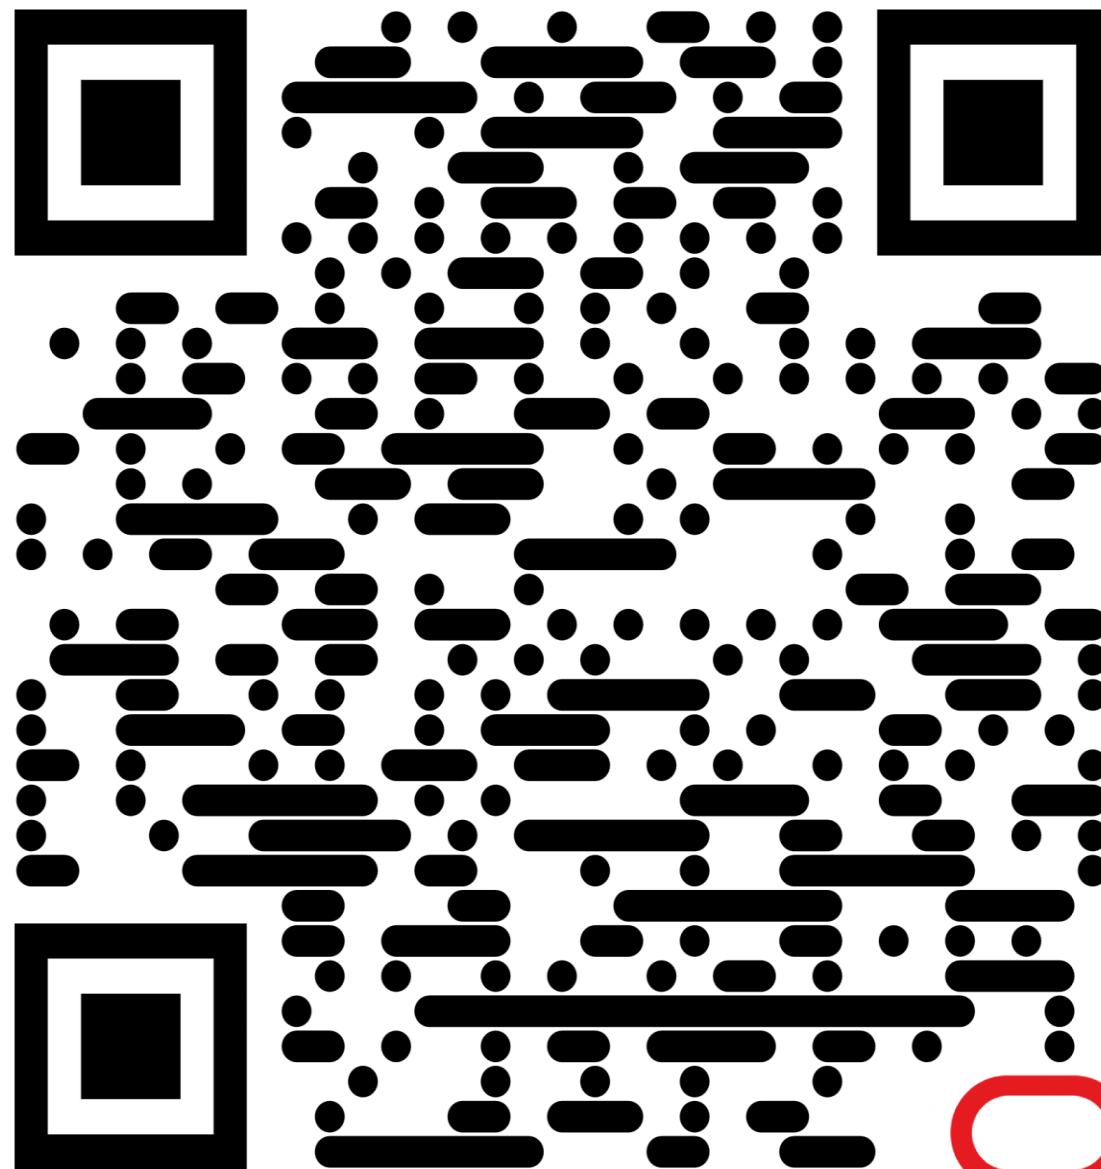

Use OCI Services in our EU Sovereign Cloud without compromising on Services, SLA, Price and Sovereignty

The path to Sovereign AI business value

AI for your business processes, your data and applications, and for builders – with no transfer of your data outside the EU
